

LA 1: Intro to Mass/Spring Systems

The mass/spring system shown above has mass m of 2 kg and the spring stiffness k is 100 N/m.

If the system is given an initial displacement of 4 cm and then released, find an expression for $y(t)$.

Compare three different solutions to this problem by overlaying graphs for :

- solving using a differential equations approach (review or use internet tutorials)
- Laplace (done in lecture 2)
- numerically (done in lab 1)
